Primary Author: Diana Lorentz

Contributors: Dave Alpern, Vikas Arora, Lance Ashdown, Hermann Baer, Vladimir Barriere, Lucy Burgess, Souripriya Das, Carolyn Gray, John Haydu, Thuvan Hoang, Wei Hu, Namit Jain, Hakan Jakobsson, Bob Jenkins, Mark Johnson, Jonathan Klein, Susan Kotsovолос, Vishu Krishnamurthy, Muralidhar Krishnaprasad, Paul Lane, Geoff Lee, Nina Lewis, Bryn Llewellyn, Phil Locke, David McElhoes, Jack Melnick, Ari Mozes, Subramanian Muralidhar, Ravi Murthy, Sujatha Muthulingam, Bruce Olsen, Alla S Pfauntsch, Tom Portfolio, Kevin Quinn, Ananth Raghavan, Den Raphaely, John Russell, Anant Singh, Rajesh Sivaramasubramaniom, Roger Snowden, Jags Srinivasan, Sankar Subramanian, Murali Thiagarajah, Michael Tobie, AhnTuan Tran, Randy Urbano, Andy Witkowski, Daniel Wong, Aravind Yalamanchi, Qin Yu, Fred Zemke, Mohamed Ziauddin

The Programs (which include both the software and documentation) contain proprietary information of Oracle Corporation; they are provided under a license agreement containing restrictions on use and disclosure and are also protected by copyright, patent, and other intellectual and industrial property laws. Reverse engineering, disassembly, or decompilation of the Programs is prohibited.

The information contained in this document is subject to change without notice. If you find any problems in the documentation, please report them to us in writing. Oracle Corporation does not warrant that this document is error free. Except as may be expressly permitted in your license agreement for these Programs, no part of these Programs may be reproduced or transmitted in any form or by any means, electronic or mechanical, for any purpose, without the express written permission of Oracle Corporation.

If the Programs are delivered to the U.S. Government or anyone licensing or using the programs on behalf of the U.S. Government, the following notice is applicable:

Restricted Rights Notice Programs delivered subject to the DOD FAR Supplement are "commercial computer software" and use, duplication, and disclosure of the Programs, including documentation, shall be subject to the licensing restrictions set forth in the applicable Oracle license agreement. Otherwise, Programs delivered subject to the Federal Acquisition Regulations are "restricted computer software" and use, duplication, and disclosure of the Programs shall be subject to the restrictions in FAR 52.227-19, Commercial Computer Software - Restricted Rights (June, 1987). Oracle Corporation, 500 Oracle Parkway, Redwood City, CA 94065.

The Programs are not intended for use in any nuclear, aviation, mass transit, medical, or other inherently dangerous applications. It shall be the licensee's responsibility to take all appropriate fail-safe, backup, redundancy, and other measures

## **APPENDIX A**

to ensure the safe use of such applications if the Programs are used for such purposes, and Oracle Corporation disclaims liability for any damages caused by such use of the Programs.

extract from chapter 5

### **Using Subqueries**

A subquery answers multiple-part questions. For example, to determine who works in Taylor's department, you can first use a subquery to determine the department in which Taylor works. You can then answer the original question with the parent SELECT statement. A subquery in the FROM clause of a SELECT statement is also called an inline view. A subquery in the WHERE clause of a SELECT statement is also called a nested subquery.

A subquery can contain another subquery. Oracle imposes no limit on the number of subquery levels in the FROM clause of the top-level query. You can nest up to 255 levels of subqueries in the WHERE clause.

If tables in a subquery have the same name as tables in the containing statement, you must prefix any reference to the column of the table from the containing statement with the table name or alias. To make your statements easier for you to read, always qualify the columns in a subquery with the name or alias of the table, view, or materialized view.

Oracle performs a correlated subquery when the subquery references a column from a table referred to in the parent statement. A correlated subquery is evaluated once for each row processed by the parent statement. The parent statement can be a SELECT, UPDATE, or DELETE statement.

A correlated subquery answers a multiple-part question whose answer depends on the value in each row processed by the parent statement. For example, you can use a correlated subquery to determine which employees earn more than the average salaries for their departments. In this case, the correlated subquery specifically computes the average salary for each department.
